

Features

- ESD Protect for 5 Lines with Unidirectional.
- Provide Transient protection for each line directly to
IEC 61000-4-2 (ESD) $\pm 16\text{kV}$ (air), $\pm 10\text{kV}$ (contact)
IEC 61000-4-4 (EFT) 35A (5/50ns)
IEC 61000-4-5 (Lightning) 3.5~ 6A (8/20 μs)
- For low operating voltage applications: 5V, 4.2V, 3.3V, and 2.5V etc.
- Fast turn-on and Low clamping voltage
- Array of surge rated equivalent TVS diodes
- Small package saves board space
- Solid-state silicon-avalanche and active circuit triggering technology

Applications

- Cellular Handsets and Accessories
- Small Panel Modules
- PDA's
- Portable Devices
- Digital Cameras
- Touch Panels
- Notebooks and Handhelds
- MP3 Players
- Peripherals

Description

AZ2115-05F is a design which includes surge rated clamping cell arrays to protect the power lines or data/control lines in an electronic systems. The AZ2115-05F has been specifically designed to protect sensitive components which are connected to power and control lines from over-voltage caused by Electrostatic Discharging (ESD), Electrical Fast Transients (EFT), and Lightning.

AZ2115-05F is a unique design which includes proprietary clamping cells in a single package. During transient conditions, the proprietary clamping cells prevent over-voltage on the power lines or control lines, protecting any downstream components.

AZ2115-05F may be used to meet the ESD immunity requirements of IEC 61000-4-2, Level 4

($\pm 15\text{kV}$ air, $\pm 8\text{kV}$ contact discharge).

Typical Characteristics

Applications Information

The AZ2115-05F is designed to protect five lines against System ESD/EFT/Lightning pulses by clamping them to an acceptable reference.

The usage of the AZ2115-05F is shown in Fig. 1. Protected lines, such as data lines, control lines, or power lines, are connected at pin 1, 3, 4, 5 and 6. The pin 2 should be connected directly to a ground plane on the board. All path lengths connected to the pins of AZ2115-05F should be kept as short as possible to minimize parasitic inductance in the board traces.

In order to obtain enough suppression of ESD induced transient, good circuit board is critical. Thus, the following guidelines are recommended:

- Minimize the path length between the protected lines and the AZ2115-05F.
- Place the AZ2115-05F near the input terminals or connectors to restrict transient coupling.
- The ESD current return path to ground should be kept as short as possible.
- Use ground planes whenever possible.
- NEVER route critical signals near board edges and near the lines which the ESD transient easily injects to.

Fig. 2 shows an example of PCB layout with the AZ2115-05F.
